Every year, since the Samsung Galaxy S4 Active hit the scene, we've seen an active version of the flagship Samsung Galaxy S. A reliable version usually brings Ingress Protection, a more substantial chassis, a larger battery and a programmable button on the phone's website. Another notable feature of active lineage was its exclusivity at T-Mobile. Samsung Galaxy S8 Active this year is no different, except the programmable button is replaced by a dedicated Bixby button. But, the new version of the Samsung Galaxy S8 Active has just passed through the FCC and it looks like the carrier's exclusivity is ending. We heard a whisper last month of Galaxy S8 Active coming to T-Mobile. Those whispers got a little louder after Evan Blas tweeted from a photo of the alleged T-Mobile Samsung Galaxy S8 Active. The phone's tweet looks identical to the AST version, so we still had to take it with a grain of salt as there is no way to differentiate the two. The new FCC filings will finally give us some details on how the two devices will differ and all but confirm that it is coming to T-Mobile. Related: Samsung Galaxy S8 Active: Why? According to the list in the FCC database, the T-Mobile Samsung Galaxy S8 Active model number will be the SM-G892U and will support LTE bands 71 and 66. While the FCC filing specifically does not mention that it is a T-Mobile device, the carrier is developing an LTE range of 71 specifically for phones in its network. You may remember hearing about Band 71 as it is part of the new 600 MHz spectrum that T-Mobile rolls out to customers. The rest of the specifications will be aligned with the ATT option. It will carry a rugged look, stunning screen, 4000 mAh battery, Snapdragon 835 processor, 4GB of RAM, and 64GB of memory. We don't have pricing details at this time, but the ATT version is currently priced at \$649.99, so we expect something in that range when it hits T-Mobile. T-Mobile customers, are you interested in Samsung Galaxy S8 Active? Will you choose one when it comes out or are there too many other compelling options on the market today? Let us know down in the comments. Page 17 of 17: Don't want a specific phone number to ring you anymore? No problem. You can avoid telemarketing and spooky exes with multiple taps on your Samsung Galaxy S8. From unknown numbers to filtering messages, you can dodge a lot of unwanted contacts. Here's a quick guide on how to block calls on Galaxy S8. -Cortney MooreBlock Incoming Calls!1. When the call you want to block comes, just tap the red phone icon and drag it to the left. Prime Day Deals: See all the best deals right now!2. To opt out of the message call, tap the Reject call with the message and drag it up. Lock numbers via App1 phone. From your home screen, choose Phone 2. Click on the 3 points in the top right corner of the screen and Settings.3. Choose the block number option as you continue or the phone number you want to block, the specified contacts and unknown callers. (Make sure the switch switches to green). You can also select a number from the latest calls or contact list and select a Block contact from the attached 3-point icon. Lock numbers through Messages1. On your phone's home screen, select the Messages app.2. Press 3 dots again in the right corner to open the settings menu. 3. Choose the Message Block option to prevent certain phone numbers or contacts from reaching you via text. Another way to block a person is to open a message from Conversations magazine and select a block number that will also completely delete the message. How to unlockYy can reverse the decision to lock back to the Phone or Messages app.1. Click on 3 points again to access the settings. Select the block number option and select a minus sign next to your contact name or number to remove from the blocked list. Current page: How to block a call on the Galaxy S8 Prev Page How to send an SOS message to the Galaxy S8 (Pocket Napiin) - Samsung Galaxy S8 and Galaxy S8 smartphones have been available through major network providers for a few weeks, but now you can buy either unlocked and SIM-free. That means you can pair a shiny, new flagship Samsung phone with any operator you represent. So here are some good reasons why you should consider an unlocked Samsung Galaxy S8 or Samsung Galaxy S8. When you buy a phone directly and SIM-free it means it's yours to save everything and you are not limited to a certain period of time on your mobile phone contract. Many networks offer large monthly SIM cards with only plans that can be cancelled at any time. Next month you can subscribe to another one. This is a great way to find the best plan for you, whether it's more or less data depending on your usage or if a certain network gives you a great connection in your area. Samsung Galaxy S8 and Galaxy S8 smartphones are also fantastic 4G LTE phones, so you can try different 4G plans according to the data rate you want to achieve. You can even pair them with Pay As You Go SIM deals, spending only the amount you want or can afford each month. Unlocked phones often get the latest version of Android as soon as it's available. Sometimes media variations mean that a new operating system update requires network approval and settings, which can delay the process a little. The unlocked smartphone has no such restrictions and will receive Super Samsung software as soon as the manufacturer can make it available. Along with the latest version of Android, unlocked Samsung Galaxy S8 and S8 phones come as the manufacturer intended. There are no additional software networks sometimes require. Samsung Trade-In program allows customers buying Samsung Galaxy S8 or Galaxy S8 to trade a suitable device and get instant trade-in credit to buy a purchase Galaxy smartphone. Currently Samsung only accepts trade-in Samsung Galaxy phones: Galaxy S6, Galaxy S6 Edge, Galaxy S6 Edge, S7 and S7 Edge, as well as Galaxy Note 5. You can buy either Samsung Galaxy S8 for a one-time fee of \$749.99 per Samsung.com with a credit card - all major types are accepted - or you can pay via PayPal. In addition, if you have a PayPal credit account, you can spread the cost of your new phone. The same applies to the Samsung Galaxy S8, which is available from \$824.99, and also on Samsung.com. Whether you choose the Samsung Galaxy S8 or Samsung Galaxy S8 you get one of the best phones around. Both feature Samsung's own infinity screen, which offers an expansive display that ranges from edge to edge. The Galaxy S8 has a 5.8-inch display, while the Galaxy S8 has a 6.2-inch equivalent. The home button on both phones is invisible, and a special sensor is hidden under the bottom of the screen. The Galaxy S8 and S8 support mobile HDR Premium technology to give amazing colors and contrast to compatible videos. And Samsung's new voice assistant, Bixby, is available on every phone. (Pocket-lint) - Samsung has announced a reliable version of its super Galaxy S8 smartphone. The company has described the Galaxy S8 Active as the toughest galaxy yet, adding various changes that make the S8 a more suitable device for those in the construction area, those who love the outdoors or those who usually need a slightly tougher device. See Samsung Galaxy S8 Active on ATT to Samsung Galaxy S8 Active the best device for you over the Galaxy S8? Here are the differences and similarities between the Galaxy S8 Active and the standard Galaxy S8 to help you decide. The S8 Active larger, thicker and heavier S8 Active is the MIL-STD-810G compatible Both have rear fingerprint sensor, one camera lens and USB Type-C Samsung Galaxy S8 Active has been designed around a metal frame, but it has a stronger structure to make it a MIL-STD-810G compatible meaning shock, destruction, waterproofness and dust resistance, not just water and dust like the Galaxy S8. It is built with military materials and has a bumper around the edges to protect it from shock, abrasions, tilting or twisting, while the back is covered with a tight texture for a more robust grip compared to the glass rear found on a standard S8 device. The Galaxy S8 Active measures 151.9 x 74.9 x 9.9mm and weighs 208.1g, while the standard Galaxy S8 measures 148.9 x 68.1 x 8.0mm and weighs 155g, meaning the active model is bigger, thicker and heavier. A similar design history runs through both devices, and it is clear that they are cut from similar fabric, but the standard S8 is a slimmer and neater of the two, while the S8 Active is bulkier. Both have almost all screen fronts, USB Type-C, 3.5mm headphone jack and single-lens camera with a fingerprint sensor on the right. How To Screens, The Super AMOLED S8 Active has a stunning S8 Active display has a flat screen, the S8 has a curved Samsung Galaxy S8 Active and the standard Galaxy S8 both have a 5.8-inch Super AMOLED display with a side ratio of 18.5:9. The S8 Active has a resistant to breaking layer protection though, along with the Corning Gorilla Glass 5, while the standard S8 has just Corning Gorilla Glass 5 protection. Permissions vary between the two devices too, albeit slightly. The S8 Active has a standard quad HD resolution that puts pixel density at 506ppi, while the S8 has a resolution of 440 x 1440 pixels for 570ppi pixel density. This means that the S8 will have a clearer, clearer display overall, although this is unlikely to be too noticeable. It's unclear if S8 Active offers Mobile HDR Premium like the S8 does, but both devices offer always on display to see some notifications without turning on the main display. The only other difference between the S8 Active and the S8 in terms of display S8 Active has a flat display, while the S8 has an edge-to-edge design. The same camera on the front and rear 12MP rear, 8MP front 4K video recording with the rear Samsung Galaxy S8 Active and Galaxy S8 both have the same camera capabilities. At the back you will find a 12-megapixel Dual Pixel camera with f1.7 aperture, autofocus phase detection and optical image stabilisation, as well as LED flash. Meanwhile, the front-facing camera has an 8-megapixel sensor with an f1.7 aperture, autofocus and iris scanning capabilities. The rear perch is capable of 4K video recording, while the front offers 1080p. Both cameras offer fantastic results based on our experience with them on the Galaxy S8, so we expect the same from the Galaxy S8 Active. The S8 Active has a larger battery both have the same processor, RAM and storage Samsung Galaxy S8 Active has most of the same hardware as the Galaxy S8, but it changes things when it comes to battery capacity, offering 4000mAh cells over 3000mAh cells in the standard model. Other specs remain the same though with the Exynos 8895 or Qualcomm Snapdragon 835 under the hood, depending on the region, along with 4GB of RAM and 64GB of storage. Both models offer microSD support to expand storage to 256GB. Both devices also support fast charging and wireless charging, and both offer support for 32-bit audio too. As we mentioned earlier, there is a USB Type-C port on both devices, along with a 3.5mm headphone jack. Both Android Nougas with TouchWiz S8 Active has quick access to certain Samsung Galaxy S8 Active features and the Galaxy S8 both run on Android Nougae with Samsung's TouchWiz software on top meaning they will both offer an almost identical user experience. Both devices support Samsung's personal assistant Bixby too, although the Hello Bixby home screen is a little different on Active compared to the S8. It will offer quick access to an active lifestyle including a stopwatch, barometer, compass and flashlight for outdoor adventures. The standard S8 has these features too, although they are not in a certain area as they are with an active model. Samsung Galaxy S8 Tips and Tricks: The expert guide Samsung Galaxy S8 Active will be available in Meteor Grey or Titan Gold, and it will be exclusive to the U.S. ATT network for a limited time. It will cost about \$650. UK and global prices and affordability have yet to be detailed. The Samsung Galaxy S8 costs 689 pounds /\$725, and it's available in six colors, though not all colors are available in each region. Most of the differences between the Samsung Galaxy S8 Active and the standard Galaxy S8 lie in their design. The S8 Active has a more robust finish, is proof of destruction and impact, as well as proof of water and dust, and it offers a flat display over the curved. It's more about strength than beauty, and it should last that a little longer too thanks to the extra battery capacity of 1000mAh. Aside from the battery, though, the S8 Active and S8 have the same hardware, so their performance should be on the same level as their camera capabilities. The S8 Active is designed for those who need a tougher device, or for those who than plan on putting a sturdy case on the standard S8 model, while the standard S8 is for those who are careful with their smartphone and want a sleek and stylish device.
